

New chamber furnace and molding line

Instead of smaller chamber furnace with the capacity 1.5 tons, new chamber tilting furnace with the capacity 3,5 tons per charge, has been installed and put into operation. Beside the fact that this furnace has higher capacity, as its integral part, automatic molding line has been installed, which is a lot faster than any line that "034 Metal Industry" d.o.o. owns, so we need less time for casting of full furnace. Also, the line has a water cooling system for ingots and empty molds.
