

## *Big holding furnace starts with the production*

In Friday, 2<sup>nd</sup> of October 2009, after the reparation, our company started with the production of aluminium alloys in big holding furnace. Its capacity is 15 tones. This furnace has gas heating and it is possible to do the complete alloying in it. In that way, our company will be in the situation, not only to produce larger quantities of alloys and to increase its capacity, but also to satisfy strict demands of foreign buyers who wants very small number of charges per delivery. So far 034 Metal Industry d.o.o. has been in the situation to reach 7 charges minimum per 24 t delivery. Now it is possible to produce 24 t of the alloy out of two charges, which is often demand of foreign buyers lately.
